# CLIMATE RISKS, REGIONAL INTEGRATION, AND SUSTAINABILITY IN THE MEKONG REGION

SUMERNET

SEI STOCKHOLM ENVIRONMENT INSTITUTE

Strategic Information and Research Development Centre

edited by Louis Lebel, Chu Thai Hoanh, Chayanis Krittasudthacheewa, and Rajesh Daniel

Rapid economic growth coupled with current and projected climate risks are challenging livelihoods and ecosystems in the Mekong region. In some locations unsustainable development has created or deepened vulnerabilities to climate change as well as global, regional, and transborder socioeconomic processes. More accessible and appropriate information is urgently needed on ways to reduce the negative aspects of development and adapt to the impacts of climate change in this region.

In this book, the Sustainable Mekong Research Network (SUMERNET) brings together multi-country studies, each of which included significant engagement with boundary partners, to analyze the impacts of, and ways to adapt to, climate risks and unsustainable growth in a highly interdependent region.

This book improves our understanding of the linkages between drivers, opportunities, and constraints on the sustainability of the Mekong region's ecosystems—at the transborder, sub-national, and local levels. Economic integration, urbanization, and climate change have impacts that vary greatly among locations. Hence, one key lesson in this book is that it is important to tailor policies and actions to specific places and communities, paying particular attention to the most vulnerable sections of the population, and the capacities of local actors. These multi-site and -country case studies provide much stronger tests of the merits and limitations of common policies than studies carried out in a single country, underlying the benefits of collaborative research.
